

## Operation Guidepoint Systems Drone

**Guadalajara, Mexico - January 31, 2017-** Guidepoint Systems invests in professional drones for locating, tracking and assisting stolen vehicles.

As the leading provider of satellite tracking services, Guidepoint has a strong presence in Mexico and the United States. In case of vehicle theft, Guidepoint is incorporating aerial drones to boost the recovery rate of vehicles. Guidepoint has started using drones in the metropolitan area of Guadalajara. In the future, it is estimated that the use of drones will be expanded in other areas of the Mexican Republic.

Our expertise in satellite tracking, indicates that there are certain cases of high risk or difficult operations of vehicle recovery. Based on culture technological innovation, the use of manned drones has been incorporated to increase the effectiveness of the recovery process.

A recent Guidepoint recovery that occurred on Saturday January 14; in which the recovery of a private vehicle (in collaboration with the corresponding authorities) was achieved. The customer reported to our 24/7/365 call center their vehicle was stolen, within minutes the vehicle's location was determined to be within the interior of private property compound, to which it was very restricted access. In this situation, we then used an aerial drone to verify with video evidence that the vehicle was actually inside the property.

While operation drone was taking place, the corresponding authorities obtained a search warrant to enter and secure the stolen vehicle. This successful recovery was presented to the Office of Prosecutor Attorney General of Jalisco.

Thanks to the speed with which the robbery was reported, it was made possible to recover the vehicle and it's tracking unit. Once again, Guidepoint is always at the forefront of satellite tracking technology.

### About Guidepoint Systems

Guidepoint Systems is a pioneer in the telematics industry.
